

**ESTIMATION  
OF  
MEASUREMENT UNCERTAINTY**

**Issue No  
PM-LAB-14**

**Revision  
D**

**Page  
1 of 2**

**Procedure Manual**

**Scope**

The purpose of this procedure is to identify uncertainty sources and estimate the uncertainty of chemical analysis results.

**Requirements for Safety & Environment**

**Method**

The uncertainty of the results may arise from following sources;

- Standard uncertainty of samplings –  $U_{\text{Sampling}}$
- Standard uncertainty of a test piece –  $U_{\text{TestPiece}}$

The following formula will be used to calculate measurement uncertainty of the test item;

$$MU = k * \sqrt{U_{\text{Sampling}}^2 + U_{\text{TestPiece}}^2}$$

**k** – Coverage factor which is set to 2.

$U_{\text{Sampling}}$  – Total 21 samples (7 samples from each alloy group – LALYFE, CRNIFE & CRFE) have been analysed (1 spark each) and standard uncertainty values were taken as a  $U_{\text{Sampling}}$  value for each element of that group.

$U_{\text{Sampling}}$  will only be taken into account for Hycast produced test pieces. It does not apply to customer provided samples.

The printouts of the sample analyses are filed in the Spectro Performance Tests folder.

|    | LALYFE  |                       | CRNIFE  |                       | CRFE    |                       |
|----|---------|-----------------------|---------|-----------------------|---------|-----------------------|

**Procedure Manual**

Standard uncertainties will be entered into the excel worksheets below for the calculation of expanded uncertainties for each element.

Reference (excel worksheet);

- [Lab Measurement Uncertainty – LALYFE](#)
- [Lab Measurement Uncertainty - CRNIFE](#)
- [Lab Measurement Uncertainty - CRFE](#)

### Reporting Uncertainty

Refer to [Test Report](#).

### Responsibilities

#### Technical Manager / Quality Manager

The Technical Manager / Quality Manager shall evaluate the proper implementation of this procedure and make changes if necessary.
